                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1,

Sequence 20, Application US/10204708

Patent No. 6677731

GENERAL INFORMATION:
APPLICANT: DLEX, Alexander
APPLICANT: DLEX, Alexander
APPLICANT: PIEPERROCK, Christian
APPLICANT: BELLIN, Kurt
ITILE OF INVENTION: Dy Assessing DNA Methylation
TITLE OF INVENTION: Dy Assessing DNA Methylation
FILE REFERENCE: 5013.002
CURRENT APPLICATION NUMBER: US/10/204,708
CURRENT APPLICATION NUMBER: US/10/204,708
FRIOR FILING DATE: 2001-04-06
PRIOR FILING DATE: 2000-04-06
PRIOR FILING DATE: 2000-04-06
PRIOR APPLICATION NUMBER: DE 10019173.8

Pred. No. is the number of results predicted by chance to have a em\_htgo\_hum:\* em\_htgo\_mus:\* em\_htgo\_other:\* 

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ATH3G
A.thaliana H3 gene 1 and H3 gene 2 for H3.3-like histone variant.

NA 6.0429
NA 6.0429.1 GI:16323
Asione, histone H3.3 homologue.

Arabidopsis thaliana (thale cress)

to the intron 1 sequence, the vectors contained a plant promoter and a herbicide tolerance gene (e.g. a mutated version of the 5-enolpyruvylshikimate-3-phosphate synthase (BPSPS) gene). The intron enhances expression of the herbicide tolerance gene in rapidly growing parts of plants. The intron can also be used to enhance expression of genes that impart resistance to pathogens or that encode nutritional or therapeutic proteins

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid returamine, Alzheimer's disease, Alzheipsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

The invention relates to a nucleic acid (I) comprising a sequence at least 18 bases of a segment of the chemically pretreated DNA of genes casociated with metabolism such as DUSPS (NM 000120), SGSH (NM 000199), SHWIZ (NM 000121), SIC7A2 (NM 000120), SGSH (NM 000199), SHWIZ (NM 000112), SIC7A2 (NM 000120), SIC7A4 (NM 000120), SHWIZ (NM 001011) (all undefined). (I) care useful for diagnosis and therapy of metabolic disease, solid tumours and cancers, as primer oligonuclecides for the amplification of DNA sequences, for detecting the cytosine methylation state and/or single conclectide polyworphisms (SNPS) in a chemically treated DNA Genes associated with metabolism. An array of (I) is useful for ascertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases or the predisposition to specific diseases by analysing cytosine methylations. The method involves chemically treating genomic cytosine methylations. The method involves chemically treating genomic oversine methylations are unmethylations. The method involves chemically pretrated genomic DNA. The genomic DNA is from call or another base which is dissimilar to cytosine in terms of hybridisation behaviour and amplifying fragments of the converted to uracil or another base which is dissimilar to cytosine in the components which contain DNA, sources of DNA comprising, for cellular components which contain DNA, sources of DNA comprising, for cellular insertions, deletions, point mutations, inversions and contine of business of genes associated with metabolism entity and futher combinations. Genetic parameters are in particular cytosine methylations and further chemical modifications of DNA bases of genes associated with metabolism. Further epigenetic parameters include Gor their regulation of Bistomes which correlates are in particular cytosine methylations and further chemical methylations of DNA solices of the involvance of the involvance of the involvance of the involvance of the involvance of the involvance of the involv
                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid, useful for diagnosis and therapy of metabolic disease, solid tumor and cancers, comprises segment of chemically modified genomic sequences of genes associated with metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; Page 79-84; 143pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid theumantoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              251

Berlin K;

Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA molecules associated with the cell cycle and specific PCR primers of the invention. The sequences are useful for detecting the methylation state of all CPG dinucleotides in a sequence and therefore for analysing associated diseases. By analysing cytosine methylations in the pretreated NRA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be ascertained. The parameters may be compared to another set of genetic diagnosis and/or prognosis events which are disadvantageous to patients. The sequences of the invention are useful for the diagnosis and therapy of HIV infection, neurodegenerative disorders, graft-versus-host disease, activiscalentary graft of the contract of the disease, activities, adjing, glomerular disease, Lewy body disease, arthritis, Claim 1; SEQ ID NO 220; 28pp; English.

The invention relates to a nucleic acid, which comprises a segment of the chemically pretreated DNA of genes associated with DNA transcription from one of 346 sequences, and an oligomer, in particular an oligomicleotide or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical to the chemically pretreated DNA of genes associated with DNA transcription. The set of oligomer probes are useful for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) in a chemically pretreated genomic DNA. The nucleic acids are useful for diagnosing or treating diseases associated with DNA transcription (particularly with the methylation status), e.g. adenosine deaminase

Claim 1; SEQ ID NO 331; 32pp; English.

The invention relates to a nucleic acid (I) comprising a segment of 18 bases of chemically pretreated DNA of angiogenesis-associated genes (II) having sequences (AB666511-AB671148) or their complements. (I), also related oligomers, are used to evaluate the methylation status and/or single-nucleotide polymorphisms, in angiogenesis-related genes, for diagnosis and treatment of eye diseases, proliferative retinopathy, necvascular glaucoma, solid tumours, inflammation, rheumatoid architis, diabetic retinopathy, macular degeneration caused by neovascularisation, psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and crown's diseases. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                   New nucleic acid fragments from chemically treated angiogenesis-associated genes, useful for determining methylation status, e.g. diagnosis or treatment of cancer.

The invention relates to a novel method for detecting and differentiating between colon cell proliferative disorders associated with at least one geneen colon cell proliferative disorders associated with at least one care reagilatory regions. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least one reagent or a series of reagents, where the reagent or series of reagents, distinguishes between methylated and non methylated CpG dinuclectides within the target nucleic acid. The molecules of the invention demonstrate cytostatic activity whilst the method may useful for detecting and differentiating between colon cell proliferative disorders, including cancers such as colon adenoma and colon carcinoma. The PNA (peptide nucleic acid) coligomers are useful as probes for determining cytosine methylation state or single nucleotide colon of the invention. This sequence is that of the pretreated genomic DNA region of the invention. This sequence is not shown within the specification but is taken from Wipoweb.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2972
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3032
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    3092

The invention relates to a novel method for detecting and differentiating between colon cell proliferative disorders associated with at least one between colon cell proliferative disorders associated with at least one care is regulatory regions. The method comprises contexting a target nucleic acid in a biological sample obtained from the subject with at cleast one reagent or a series of reagents, where the reagent or series of reagents distinguishes between methylated and non methylated CpG dinucleotides within the target nucleic acid. The molecules of the invention demonstrate cytostatic activity whilst the method may useful for detecting and differentiating between colon cell proliferative disorders, including cancers such as colon adenda and colon carcinoma. The PNA (peptide nucleic acid)-oligomers are useful as probes for determining cytosine methylation state or single nucleotide cypolymorphisms. The current sequence is that of the pretreated genomic DNA region of the invention. This sequence is not shown within the specification but is taken from Wipoweb. 2853 Trirririangarirganirgiaririrriranaaaririgiraniriraaagirira 2912 108 TITCIAIICIIGGCCAIIAICIIGIIIICIICGCCGAAIGAICIICCGIAIAAAGAIIIIA 167 228 CTGAAATTCTCGATAGTTTTCACATGTGTAAATAGATTGTTCTTATTCGGCGATTGTTGA 287 288 TTAGGGTTTTTGATTTTCTTGATTATTGCAATTAGGGATTTTCTTTGGTTTTGTGT 347 Detecting and differentiating between colon cell proliferative disorders associated with a gene or its regulatory regions comprises contacting a target nucleic acid in a biological sample obtained from the subject with colon cell proliferative disorder, non methylated CpG dinucleotide; cytostatic; cancer; adenoma; carcinoma; cytosine methylation state; ds 348 TGATCTTACGATACATTCCTGCAATTGAATACGTATGGATCTAAATCTTGTTAATTTGTT 168 GGTTAGAGATGAATCGTATAGCTAGATTTCATCACCAGATAGTTTCTTTGTCTAGAATCT Sequence 5987 BP; 1754 A; 96 C; 1096 G; 3041 T; 0 U; 0 Other; DB 9; Length 5987; Query Match 11.7%; Score 49; DB 9; Length 598 Best Local Similarity 47.5%; Pred. The invention relates to a nucleic acid comprising a sequence at least 18 bases in length of a segment of the chemically pretreated DNA of genes associated with pharmacogenomics according to one of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences of the sequences and their complements The chemical pretreatment is bisulphite tratment to convert cytosines (but not methyl-cytosines) into uracilis. Also included are an oligomer (II) in particular an oligomer one compenies (but not methyl-cytosines) into uracilis. Also included are an oligomer (II) in particular an oligomer one compenies (but not methyl-cytosines) into uracilis. Also included are an oligomer (II) in particular an oligomer one sequence having a length of 9 mucleotides which hybridises to or is identical to a chemically pretreated DNA of genes associated with complements and their complements associated with the methylation state (CpG) and/or detecting SNPs (single nucleotide polymorphisms) of the 87 squences. The coligomer may also be used as PCR primers. The set of 87 nucleic acids and their complements is useful for diagnosis and therapy of solid tumours and cancer. The present sequence data for this patent did concerned to the printed specification, but was obtained in continuity and concern the present sequence data for this patent did of the printed specification, but was obtained in continuity and concern the present sequence data for this patent did of the printed specification, but was obtained in continuity and concern the present sequence data for this patent did of the printed specification, but was obtained in the printed specification, but were one the 87 DNA continuity and concern the continuation of the printed specification and concern the continuation of the printed specification and New nucleic acid, oligonuclectides and peptide nucleic acid-oligomers, useful for detecting cytosine methylation state of genes associated with pharmacogenomics and for therapy of diseases e.g. cancer. The sequences are useful for detecting the methylation state of all CpG dinucleotides in a sequence and therefore for analysing associated diseases. By analysing cytosine methylations in the pretreated DNA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be ascertained. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                    Cell cycle; human; CpG dinucleotide; cytosine methylation; HIV; aging; human immunodeficiency virus; neurodegenerative disorder; solid tumour; praft-versus-host disease; glomerular disease; Lewy body disease; cancer; arthritis; arteriosclerosis; anti-HIV; neuroprotective; antiarthritis; immunosuppressive; antitumour; cytostatic; antiarteriosclerotic; ds;

The sequences of the invention are useful for the diagnosis and therapy of HIV infection, neurodegenerative disorders, graft-versus-host disease, aging, glomerular disease, Lewy body disease, arthritis, arteriosclerosis, solid tumours and cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; ds; bisulphite treatment; CpG; DNA methylation; cancer; tumour; cytostatic; ALDH6; CYP11A; CYP11B1; CYP3A3; DPYD; EPHX2; OCLN; TXNRD1; UGT8; MRP; pharmacogenomics; SNP; single nucleotide polymorphism.

```
The invention relates to a nucleic acid, which comprises a segment of the chemically pretreated DNA of genes associated with DNA transcription from one of 346 sequences, and an oligomer, in particular an oligomicleotide or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical to the chemically pretreated DNA of genes associated with DNA transcription. The set of oligomer probes are useful for detecting the cranscription. The set of oligomer probes are useful for detecting the cranscription. The set of oligomer probes are useful for diagnosing or treating diseases associated with DNA transcription (particularly with the methylation status), e.g. adenosine deaminase deficiency, viral infection, retroviral infection, Sezary syndrome, hemmal-plot disorders, immunological disorders, warner syndrome, thermological disorders, immunological disorders, syndrome, conserving syndrome, arthritis, polyglutamine disorders, myocardial infarction, hypertension, angiogenesis, erythropolesis, congenital heart disorders associated genomic DNA molecules of the invention. Note: The sequence of associated genomic DNA molecules of the invention. Note: The sequence dates for this parent did not form part of the printed specification but was obtained in electronic format directly from the European Patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acids or oligomers, useful for diagnosing or treating diseases associated with DNA transcription, e.g. immunological disorders, Werner syndrome, psoriasis, myocardial infarction, solid tumors or
myelodysplastic syndrome; myocardial infarction; hypertension; arthritis;
                angiogenesis; congenital heart disease; HDR syndrome; gene therapy; polyglutamine disorder; solid tumour.

The present invention describes a method for detecting and differentiating between haematopoietic cell proliferative disorders associated with at least I gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with a least 1 reagent, which distinguishes between methylated and non-methylated CDC dinuclectides within the target nucleic acid. AEZ09861 to AEZ1118 represent specifically claimed nuclectide sequences from the present invention. Oligonuclectides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative disorder haematopoietic cells and proliferative disorder haematopoietic cells and proliferative clamphocytic leukaemia and acute myelogenous leukaemia; as probes for determining the cytosine methylation state and/or single nucleotide polymorphiams (SMPS) of haematopoietic cell proliferation disorder related the cytosine methylation state and/or single nucleotide polymorphiams (SMPS) of haematopoietic cell proliferation disorder related the cytosine methylation state and/or single nucleotide polymorphiams (SMPS) of haematopoietic sell proliferation disorder related the cytosine methylation state and/or single nucleotide polymorphiam (SMPS) of haematopoietic cells and successive contactions and the cytosine methylation state and contactions and the cytosine methylation state and contactions and the cytosine methylation state and contactions and the cytosine methylation state and contactions and the cytosine methylation state and contactions and the cytosine methylation state and contactions and the cytosine methylation state and contactions and the cytosine methylation state and contactions and contactions and contactions and contactions and contactions and contactions and contactions and contactions and contactions and contactions and contactions and contactions and contactions and contactions and contactions and contactions and contactions and contacti
                                                                                                                1466 TGTTTTTTTGATGTTGGTTTTGTTTTTTTAATTTTAAGTTTATATGTGGGTTAGATTGA 1525
Detecting and differentiating between hematopoietic cell proliferative disorders, comprises contacting a target nucleic acid with a reagent that distinguishes between methylated and non-methylated CpG dinucleotides.

related sequences and their complements, and as primers for the amplification of haematopoietic cell proliferation disorder related DNA sequences. The muclecides sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of memarcopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders allowing for improved and informed treatment of patients

Submitted (21-07T-2002) Weisshaar B., Max-Planck-Institut fuer Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany This sequence is recovered from the left border of the T-DNA. It indicates an insertion close to owthin gene At4940040. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Information on line availability can be found at:

This sequence is recovered from the left border of the T-DNA. It
indicates an insertion close to or within gene Ar4940040. The
sequences are generated at the MPI for Plant Breeding Research in
the context of the GABI-Kat project. GABI-Kat is part of the German
Plant Genomics program designated 'GABI'. Information on line
availability can be found at:
http://www.mpiz-koeln.mgq.de/GABI-Kat/.

/note="PCR was performed on DNA from Arabidopsis thaliana
plants (TI) which were transformed with the T-DNA from
vector pAC16. The lines contain one or more T-DNA
insertions. The DNA fragment(s) resulting from the PCR
were directly sequenced to determine the genomic sequence
flanking the insertion. Sequences displaying significant
similarity to the A. Inalaina nuclear genome sequence
processed for submission. T-DNA derived sequences were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 223 ragaarcrereaaarreregaragrirreaeargreraaaragarrerrerrarregeer 164

Determination of this BAC-end sequence was carried out as part of a collaboration of this BAC-end sequence was carried out as part of a trtp://www.edgp.ebi.ac.uk - This Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       530 iCarrrirrirrirrirrirrirccrrrrrrrarkkiwrrkrrrrrrrwrrwgkrr 471

By 191 91006 EVRY cedex - FRANCE (B-mail : segref@genoscope.cns.fr - Web : www.genoscope.cns.fr - Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Constructed by partial Cancer Genetics at the Roswell Park Cancer Constructed by partial BCORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on bw sp, the same strain used for the BDGP's pland how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              brosophila melanogaster genome survey sequence TET3 end of BAC #BACR16N08 of RPCI-98 library from Drosophila melanogaster (fruit fly), genomic survey sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ó;

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Rowell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial Ecopi and for Drosophila DNA provided by the BDGP from the isogenic strain v2: or by, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (BDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CBPH (Centre Stands et W Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          295
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               835

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk. -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    402
